Product Overview

Industrial Hydraulic Toe Jack

This hydraulic toe jack is engineered for heavy-duty lifting in confined spaces, making it an essential tool for mining, rail transposition, and machinery maintenance. Featuring a low-profile lifting toe and a reinforced alloy steel construction, it provides exceptional strength and durability for demanding industrial environments. The unit includes advanced safety features such as an integrated overload protection valve and a versatile dual-lifting point design for both toe and head operations.

Technical Specifications

Safety Features

- Overload protection valve
- Stable support base
- Low clearance lifting toe

Material	High-strength alloy steel
----------	---------------------------

Lifting Points	Toe, Head
----------------	-----------

Operational Features

Key Operational Benefits

Quick Adjustment • Low Clearance Access • Effortless Operation • Versatile Positioning

Suitable Applications

Application Area

Mining service

Rail transposition

Machinery maintenance

Equipment installation

Operation	Manual hand operation
-----------	-----------------------
