

Hydraulic Toe Jack for Low Clearance Lifting

This hydraulic toe jack is designed for lifting heavy loads where minimal ground clearance is available. It is suitable for machinery moving, equipment installation, and maintenance applications.

ADDITIONAL IMAGES

Product Overview

Versatile Lifting Solution

This heavy-duty hydraulic toe jack is engineered for lifting loads with both low and high clearances, making it an essential tool for machinery installation, house moving, and construction projects. Designed for durability in demanding environments, the unit features a heat-treated piston that resists corrosion and ensures consistent performance despite extreme temperature fluctuations. Integrated safety mechanisms, including an overload protection valve, provide peace of mind during operation.

Key Features

Typical Applications

- Machinery installation
- House moving
- Shipyard maintenance
- Bridge building
- Plant construction

Safety & Durability

Overload Protection Valve, Heat-Treated Piston, Corrosion Resistant, Temperature Resistant
