

# Hydraulic Toe Jack

This hydraulic jack features both a head and a toe part for lifting. The head part has twice the capacity of the toe part.

## Product Overview

### Versatile Hydraulic Lifting Solution

This hydraulic toe jack is engineered for precision lifting in demanding industrial environments. Featuring a dual-part design, it includes both a head and a toe lifting point, with the head capacity rated at twice that of the toe. The unit allows for quick and easy adjustment of the toe height to any starting position, making it ideal for loads with either very low or high clearances.

## Technical Specifications

### Lifting Configuration

**2 x Toe**

Head Capacity Ratio

### Key Features

- Dual-part lifting design
- Adjustable toe height
- Suitable for low and high clearance
- Spring-assisted return mechanism
- Robust steel construction

## Applications

### Typical Applications

Industrial Lifting, Construction, Maintenance, Heavy Load Positioning
