

Hydraulic Tube Bending Machine

This hydraulic tube bender is designed for bending various types of metal tubing. The machine is suitable for bending steel, aluminum, and copper tubes with precision.

Product Overview

Industrial Precision Bending

This hydraulic tube bending machine is engineered for high-accuracy metal tube fabrication in demanding industrial and construction environments. Utilizing a powerful hydraulic pump system, it provides consistent pressure for smooth, reliable bends across various metal types. The integrated portable frame and versatile die set make it a flexible solution for diverse project requirements.

Technical Specifications

Compatible Materials	Steel, Aluminum, Copper
Portability	Yes
Drive System	Hydraulic

Features

Key Machine Features

- High-pressure hydraulic pump for consistent bending
- Durable frame with wheels for industrial portability
- Interchangeable die set for multiple tube diameters
- Engineered for high-precision metal forming

Target Applications

Industrial Manufacturing • Construction Projects • Tube Fabrication
