Product Overview

High-Efficiency Hydraulic Road Compaction

This hydraulic vibratory road roller is engineered for precision compaction across diverse construction environments. Equipped with a reliable engine, imported hydraulic components, and a small working radius, it provides superior maneuverability in narrow spaces like trenches and walkways. The machine features advanced ergonomic controls and high-quality bearings to ensure consistent performance and operator comfort during intensive road maintenance and landscaping projects.

Key Features

Standard Equipment

- Imported variable hydraulic pump and motor
- Hydraulic steering system
- Stepless variable speed control
- Hydraulic vibration control
- Premium comfort adjustable seats
- High-performance precision bearings

Technical Specifications

Surface Finish

Anti-Corrosion Coating • Rust Resistant

Primary Applications

Asphalt Surface Compaction, Trench Backfilling, Gravel & Soil Compaction, Sports Grounds, School Playgrounds, Sidewalks & Bridges
