

Hydraulic Waste Compressor for Volume Reduction

This hydraulic waste compressor efficiently reduces waste volume. It features a durable steel frame, hydraulic cylinders, and a safety cage, suitable for industrial and municipal applications.

Product Overview

Industrial Waste Management Solution

This hydraulic waste compressor is engineered for high-efficiency volume reduction in industrial and municipal waste processing environments. Built with a robust steel frame and powerful hydraulic cylinders, it ensures reliable performance and significant space savings. The system includes an integrated collection container and an automated control interface, prioritizing both operational productivity and safety.

Technical Specifications

Compression System	Multi-cylinder hydraulic system
Frame Material	Reinforced Steel

Safety & Operation

Safety Features	Safety Cage, Automated Control System
Operation Mode	Automated

Applications

Suitable Environments

- Industrial waste processing
- Municipal waste management
