

Hydraulic/Pneumatic System Manifold

This component is a manifold designed for hydraulic or pneumatic systems. It features multiple ports for connecting to other system components and a grid-like top surface.

Product Overview

Industrial Manifold System

This hydraulic and pneumatic system manifold is engineered as a high-performance component for fluid control applications. Featuring a robust, grid-reinforced surface, it provides both mechanical stability and efficient heat dissipation in demanding industrial environments. The design facilitates organized, multi-port connectivity, making it an essential interface for complex mechanical systems.

Technical Details

Key Features

- Integrated grid-structure reinforcement
- Multi-port interface design
- Engineered for heat dissipation

Material	Lightweight metal alloy (Aluminum base)
Manufacturing Process	Die-cast
Suitable Systems	Hydraulic, Pneumatic
