

# Hydroelectric Generator

This generator is used in electricity generation projects. It is suitable for water and electricity and new energy surveys, design, consultation, and construction.

## Product Overview

### Comprehensive Hydroelectric Solutions

This hydroelectric generator is designed for large-scale water and electricity infrastructure projects. It supports comprehensive technical services including project survey, design, consultation, and construction management. Engineered for reliability, this equipment is suitable for sustainable energy development and major power generation facilities.

## Technical Scope

### Service & Application Scope

- Electricity generation project development
- New energy survey and design
- Project consultation and supervision
- Safety appraisal and completion approval
- Primary contracting and project management

### Industry Focus

Water Conservancy, Hydroelectric Power, New Energy, Infrastructure Development

## Installation & Deployment

### Installation Capability

Large-scale Stator Installation • On-site Construction Support • Project Management
