

HZ150 Stationary Concrete Batching Plant

The HZ150 series ready-mixed concrete mixing plant is a high-capacity, stationary concrete production facility designed for large-scale construction projects. It integrates aggregate storage, weighing, conveying, mixing, and discharge systems to ensure efficient and consistent concrete production.

Overview

High-Capacity Stationary Batching Solution

The HZ150 series is a high-capacity, stationary concrete production facility engineered for large-scale construction projects. It integrates advanced systems for aggregate storage, precision weighing, conveying, mixing, and discharge to ensure consistent, high-quality concrete output. Designed for durability and reliability, this plant features a powerful twin-shaft mixer and a fully computerized control system for automated, efficient operation.

Technical Specifications

Production Capacity

150 m³/h

Rated Output

Integrated Systems

- Aggregate storage bins
- High-precision weighing system
- Conveying system
- Twin-shaft mixing unit
- Computerized control system

Operational Features

Control System

Automated • Computerized Monitoring

Ideal Applications

Large-scale construction, Ready-mixed concrete production, Infrastructure projects

Design Focus

Heavy-duty industrial durability
