

HZS150 Concrete Mixing Plant

This concrete mixing plant is designed for high-volume production. Its modular design facilitates easy installation and relocation.

Overview

HZS150 Concrete Mixing Plant

The HZS150 is a high-capacity concrete mixing plant engineered for large-scale construction, commercial concrete supply, and precast production. It features an intelligent control system with GPRS remote diagnostics and a modular design that facilitates convenient transportation and rapid on-site installation. Built for efficiency and environmental compliance, the plant utilizes precision weighing transducers and high-performance pneumatic components to ensure consistent, high-quality output.

Technical Features

Design & Construction

- Modular structure for easy relocation
- Rapid installation process
- Heat-insulated enclosure
- Environmentally friendly design

Control System

Intelligent Interface, Automated Operation, GPRS Remote Diagnostics, Fault Diagnosis

Performance

Mixing Performance

High Efficiency • Low Energy Consumption • Thorough Cleaning

Measurement Components

- High-performance pneumatic components
- Precision weighing transducers
- Rapid response measurement
