

HZS75 Concrete Mixing Plant

The HZS75 concrete mixing plant is a high-performance solution for medium to large-scale construction. It features a robust mixing system, precise weighing, and efficient material conveying for consistent, high-quality concrete output.

Overview

High-Performance Concrete Production

The HZS75 ready-mixed concrete mixing plant is a high-performance solution engineered for medium to large-scale construction projects. It features a robust mixing system, precise aggregate and cement weighing, and an efficient material conveying system to ensure consistent, high-quality output. Designed for durability and ease of maintenance, this plant optimizes construction efficiency while minimizing material waste in demanding environments.

Technical Specifications

Key Components

- Aggregate storage bins
- Cement silo
- Water tank
- Additive system
- Mixing unit
- Control room

Model Series

HZS75

Operational Features

Performance Highlights

75 m³/h

Theoretical Capacity

Automation & Control

Automated operation, Real-time monitoring, Precise weighing systems
