

I-Beam Clamp

This I-beam clamp is designed for secure attachment to structural steel members. Constructed from high-strength steel, it provides a reliable lifting point for various lifting equipment.

Overview

Professional Rigging Solution

The I-Beam Clamp is a robust rigging tool engineered for secure, temporary attachment to structural steel members. Constructed from high-strength alloy steel, it provides a reliable lifting point for hoists and cranes. Its adjustable design and threaded spindle mechanism allow for precise installation across various beam widths.

Technical Details

Material	Alloy Steel
Adjustment Range	Wide adjustment range
Safety Features	Threaded Spindle, Locking Mechanism

Applications

Primary Applications

- Construction
- Manufacturing
- Maintenance
