

Ice Maker Replacement Compressor

This high-efficiency compressor is designed for ice maker applications, optimized for 220-240V, 50-60Hz power input. It features copper tubing for refrigerant connections and vibration-dampening mounts for quiet operation, making it ideal for light commercial refrigeration systems.

Overview

High-Efficiency Ice Maker Compressor

This hermetically sealed compressor is specifically engineered for light commercial refrigeration and ice maker applications. Designed for reliable performance and long service life, it features robust construction with vibration-dampening mounts to ensure quiet operation. The unit is optimized for 220-240V power inputs and utilizes R290a refrigerant for efficient cooling.

Technical Specifications

Cooling Capacity

350 W

Cooling Capacity

Model Number QD65R

Refrigerant R290a

Electrical Requirements

Voltage / Frequency 220-240V / 50-60Hz

Compliance & Quality

Certifications CCC, CB, CE, ROHS

Features

Key Features

- Hermetically sealed design
- Includes electrical connection box
- Copper tubing for refrigerant lines
- Vibration-dampening mounts included
