

# Idler Sprocket for Power Transmission

This idler sprocket is designed for smooth and efficient power transmission in machinery. Its precision-machined teeth ensure optimal chain engagement and reduced wear.

## Product Overview

### High-Efficiency Idler Sprocket

This idler sprocket is engineered for smooth and efficient power transmission in various industrial machinery. Featuring precision-machined teeth, it ensures optimal chain engagement and significantly reduced wear during operation. The unit incorporates a high-quality bearing designed for low friction and extended service life, making it a reliable component for conveyor systems, agricultural equipment, and mechanical drives.

## Technical Specifications

|                      |  |
|----------------------|--|
| Material Composition | Carbon steel, Alloy steel, Stainless steel |
| Surface Finish       | Oil-proof                                  |
| Model Identifier     | 124113                                     |
