

IEC61032 Test Probe

This probe verifies the protection of individuals from hazardous parts and confirms the mechanical strength of openings. It is used on enclosures and internal barriers.

Product Overview

IEC61032 Test Probe 11

This precision instrument is specifically engineered for compliance testing in accordance with IEC61032 standards. It is designed to verify the protection of persons against access to hazardous parts and to assess the mechanical strength of openings in enclosures or internal barriers. Essential for manufacturers and testing laboratories, this probe ensures product safety and strict conformity with international electrical standards.

Technical Specifications

Primary Functions

- Verify protection against access to hazardous parts
- Verify mechanical strength of openings
- Assess internal barriers

Key Features

Rigid rod • Insulated handle • High precision • Repeatable testing

Construction Material	Stainless steel rod with insulating handle
Compliance Standards	IEC61032
