

IGBT Inverter Welding Machine

This microprocessor-controlled welding machine is designed for TIG, MMA, and PULSE welding applications. It utilizes IGBT inverter technology for efficient and stable power output, and is suitable for welding steel, stainless steel, and aluminum.

Overview

Professional IGBT Inverter Welder

This microprocessor-controlled welding machine is engineered for versatile TIG, MMA, and PULSE welding applications. Utilizing advanced IGBT inverter technology, it delivers stable and efficient power output suitable for demanding industrial tasks. Designed for precision, the unit features a digital display for accurate parameter monitoring and is built for mobility with integrated wheels.

Technical Specifications

Compatible Materials

- Steel
- Stainless Steel
- Aluminum

Welding Modes

TIG, MMA, PULSE

Technology

IGBT Inverter

Performance Metrics

Performance Highlights

400 WSM

Model Capacity

Design & Usability

Interface Features

- Digital Display
- Adjustable Current Controls
- Adjustable Voltage Controls
- Pulse Frequency Adjustment

Portability

Yes
