

IGBT MIG500 Inverter Welding Machine with Microprocessor Control

This inverter IGBT MIG500 welding machine delivers high-performance welding for professional use. It uses a microprocessor control system to ensure precise and stable welding parameters, along with digital displays for easy monitoring.

Overview

High-Performance Welding Solution

The MIG500 is a professional-grade inverter welding machine engineered for demanding industrial applications. Equipped with advanced microprocessor control, it delivers precise and stable welding parameters for consistent results. Its robust construction and integrated cooling system ensure durability and extended operational lifespan in harsh environments.

Technical Specifications

Technology

IGBT Inverter • Microprocessor Control

Monitoring

- Digital Voltage Display
- Digital Current Display

Welding Process

MIG

Design & Build

Portability

Yes

Cooling System

Integrated active cooling
