

Illuminated Pushbutton Switch

Illuminated pushbuttons are electromechanical devices used to control electrical circuits. When pressed, the button activates or deactivates a circuit, and the illumination provides visual feedback on the button's status.

Product Overview

Industrial Illuminated Pushbutton Switch

The LA39/PB1 series is a robust, electromechanical pushbutton switch designed for demanding industrial applications. Featuring integrated illumination, these switches provide clear visual feedback regarding circuit status, significantly enhancing operational safety and efficiency. Built for reliability in control panels and machinery, they are ideal for essential functions such as start, stop, reset, and emergency operations.

Technical Standards

Performance Ratings

Category	Standard
AC Application	AC-15
DC Application	DC-13

Compliance	IEC 60947-5-1, AC-15, DC-13

Key Features

Core Features

- Integrated illumination for status visibility
- Durable construction for heavy-duty environments
- Versatile control functions (start/stop/reset)
- Compatible with industrial control panels
