

Immersion Heater Element

This immersion heater element is engineered for efficient heating across diverse industrial applications. Its stainless steel construction ensures excellent corrosion resistance and long-term durability.

Product Overview

High-Efficiency Immersion Heating

This high-quality immersion heater element is engineered for efficient heating across a wide range of industrial applications. Constructed from durable stainless steel, the unit provides excellent corrosion resistance and long-term operational reliability. Its specialized looped design maximizes surface area to ensure optimal heat transfer efficiency in demanding environments.

Technical Specifications

Typical Applications

- Water Heaters
- Boilers
- Liquid Heating Systems

Material Composition	Stainless Steel
Design Features	Looped Design, Corrosion Resistant, Industrial Grade
Connection Type	Standard Terminals
