

Immersion Heater Element for Water Heaters

This immersion heater element is designed for efficient water heating. It features durable copper construction with a brass fitting and is rated for 240 volts and 4500 watts.

Product Overview

High-Performance Immersion Heating

This immersion heater element is engineered for efficient and reliable water heating applications. Built with durable, high-quality materials including a copper heating element and a brass fitting, it ensures long-lasting performance in demanding environments. Designed for standard water heater systems, this component provides consistent operation for professional and residential setups.

Technical Specifications

Rated Voltage	240 V
Power Rating	4500 W

Construction & Materials

Material Composition	Copper Element, Brass Fitting
