

Immersion Heater Element for Water Heaters

This electric heater part is designed for use in water heaters and boilers. It uses a copper heating element with a dual U-shaped configuration.

Product Overview

Immersion Heater Element

This high-efficiency immersion heater element is designed for reliable performance in water heaters and boilers. Featuring a robust brass flange and a versatile bending configuration, it ensures optimal heat transfer and durability. Available in multiple power ratings and voltage options, it is engineered to meet diverse residential and commercial water heating requirements.

Electrical Specifications

Power Output Options

- 1200W
- 1500W
- 2000W - 3000W

Voltage & Frequency

220V-240V / 50Hz, 110V / 60Hz

Physical Dimensions

Sheath Diameter	8.25 mm
Length	30 cm
Flange Specification	1 1/4 inch brass flange

Features

Compatible Applications

Water Heater • Boiler

Mg Anode Support

Yes

Anode Thread Size

M5/M6
