

Immersion Heating Element for Water Heaters

This electric heater part is designed for use in water heaters and boilers. It is constructed from copper and has a CE certificate.

Product Overview

High-Efficiency Immersion Heating Element

This immersion heating element is engineered for reliable performance in water heaters and boilers. It features a robust design with a 1 1/4" brass flange for secure installation and efficient heat transfer. Designed for versatility, it supports a wide range of power outputs and electrical configurations to suit various industrial and residential water heating applications.

Technical Specifications

Output Power

2000 W

Minimum Power

3000 W

Maximum Power

Voltage Compatibility

220V-240V/50Hz, 110V/60Hz

Sheath Diameter

8.5 mm

Physical Attributes

Mg Anode Compatibility

- M5 thread
- M6 thread
- Without anode holding

Flange Specification

1 1/4" brass flange

Application

Primary Applications

Water Heater • Boiler
