

Immersion Water Heater with Threaded Flange

This immersion heater is designed for heating water in tanks or vessels. It features a robust construction with corrosion-resistant materials for durability and efficient heat transfer.

Product Overview

Industrial Immersion Heater

This immersion water heater features a threaded flange design, engineered for secure and efficient installation in tanks and vessels. Constructed with a high-quality copper sheath and nickel coating, it offers excellent corrosion resistance and durability for demanding industrial applications. The unit utilizes a robust resistance wire configuration to ensure reliable thermal performance for boilers and water heating systems.

Technical Specifications

Resistance Wire Material	OCr25Al5
Sheath Material	Copper with Nickel Coating
Part Number	CHM12333

Packaging and Logistics

Carton Dimensions	445 x 340 x 355 mm
Quantity per Carton	50
