

Immersion Water Heating Element with Brass Flange

This immersion heater element is designed for heating water. It features a robust construction with copper tubular elements and a threaded brass flange for secure mounting.

Product Overview

High-Efficiency Immersion Heating

This industrial-grade immersion water heating element is engineered for reliable performance in water heaters, boilers, and specialized heating systems. It features a high-quality copper construction with a protective nickel-plated surface and a secure brass flange for robust mounting. Designed for versatility, it supports a wide range of operational requirements including power ratings from 1000W to 2000W and voltages between 110V and 240V.

Technical Specifications

Sheath Diameter	8.3 mm
Length Range	30-90 cm

Performance

Performance Ratings

1000 W
Min Power

2000 W
Max Power

Materials & Construction

Material Details	Copper Element, Brass Flange, Epoxy Sealing, Nickel-Plated Surface
------------------	--

Electrical

Voltage Compatibility

- 110V
- 240V
