

Immersion Water Heating Element

Immersion heating element designed for rapid water heating. It features a multi-tube construction with a terminal block for electrical connections.

Product Overview

High-Efficiency Immersion Heating

This immersion heating element is engineered for rapid and reliable water heating across various industrial and commercial applications. The design utilizes a robust multi-tube construction to maximize heat transfer efficiency and longevity. Equipped with an integrated terminal block, it allows for secure and straightforward electrical connectivity in diverse installation environments.

Technical Specifications

Heating Method	Immersion
Construction Type	Multi-tube
Connection Interface	Terminal block

Compliance & Usage

Typical Applications	Industrial water heating, Commercial water heating, Rapid thermal processing
