

In-Line Fuse Holder with Red Cable

This in-line fuse holder with a red cable is designed for automotive or electronic applications. It provides protection for electrical circuits by housing a fuse that will blow in the event of an overcurrent.

Product Overview

Reliable Circuit Protection

This in-line fuse holder is engineered for automotive and electronic applications, providing essential protection for electrical circuits. Designed to house a fuse that interrupts power in the event of an overcurrent, it helps prevent damage to sensitive components. The durable black plastic construction ensures longevity, while the integrated red cable simplifies identification of the positive wire during installation.

Technical Specifications

Application	Automotive, Electronic
Cable Coding	Red (Positive)
Housing Material	Durable Black Plastic
Installation Method	In-line wiring
