

Industrial AC Alternator

This robust and efficient alternator is designed for industrial power generation applications. The synchronous generator provides reliable AC power output with high efficiency and stable voltage regulation.

Product Overview

Industrial-Grade Power Generation

The SLG454 is a robust and efficient synchronous alternator engineered for reliable industrial power generation. Designed for continuous duty, it ensures stable voltage regulation and high efficiency even in demanding environments. This versatile unit is ideal for integration into generator sets, marine vessels, and critical industrial power systems.

Technical Specifications

Performance Metrics

454 kW

Model Capacity

Key Features

- Robust industrial construction
- Optimized cooling system
- Stable voltage regulation
- Designed for continuous operation

Ideal Applications

Generator Sets, Marine Applications, Industrial Power Systems
