

Industrial Air and Gas Compressor

This compressor is designed for industrial applications requiring compressed air or gas. It comes in 8 series with nearly 100 kinds of products, with a power range of 10–7500kW.

Overview

Industrial Compression Solution

This industrial-grade air and gas compressor system is engineered for heavy-duty performance in demanding manufacturing and processing environments. Featuring a robust, skid-mounted design, the unit integrates high-efficiency compression bodies with advanced pressure vessels and control instrumentation. It is fully equipped for continuous operation, utilizing electric motor drives to ensure reliable gas compression for diverse industrial applications.

Technical Specifications

Key Components

- Compressor bodies
- Pressure vessels
- Control panel
- Radiator cooling system
- Safety grating and railings

System Configuration

Skid-Mounted, Multi-Unit Manifold, Electric Motor Driven, High-Pressure Capable
