

Industrial Air Compressor

This industrial air compressor provides compressed air for various pneumatic systems. It is designed for reliable and consistent performance in industrial settings.

Product Overview

Precision Stamping Capabilities

This high-speed precision stamping press is engineered specifically for manufacturing motor laminations and electrical steel components. It integrates automatic feeding and stacking systems to maximize production efficiency and consistency. Designed for the electric motor and transformer industries, the machine reliably produces a diverse range of lamination shapes and sizes.

Technical Specifications

Model Identifier	76-200B
Primary Applications	Motor Laminations, Electrical Steel Parts, Electric Motor Manufacturing, Transformer Industry

Features

Automation Systems

- Automatic Feeding System
- Automatic Stacking System

Operational Control

Robust Control Panel • Advanced Safety Features
