

Industrial Air Compressor for High-Pressure Applications

This heavy-duty compressor is designed for industrial applications requiring high-pressure air. It features a robust construction, efficient motor, and advanced control system for reliable performance and precise operation.

Product Overview

High-Performance Industrial Compressor

This heavy-duty air compressor is engineered specifically for demanding industrial environments that require consistent high-pressure air output. Built for reliability, it features a robust construction paired with an advanced control system to ensure precise operation during critical tasks. It is an ideal solution for metal forming processes and other heavy-duty industrial applications requiring dependable performance.

Technical Specifications

Model Identifier	XZ3-300KB
Primary Applications	Metal Forming, High-Pressure Industrial, Heavy-Duty Air Supply

Safety & Control

Integrated Safety Systems

- Pressure relief valves
- Overload protection
- Advanced control system
