

Industrial Air Compressor for Metal Forming

This industrial compressor unit is mounted on a metal frame. It features a circular design with multiple outlets and connections for integration into larger systems.

Overview

Industrial Air Compressor for Metal Forming

This industrial-grade air compressor is engineered specifically for the demanding requirements of metal forming and rolling mill applications. Featuring a robust, circular design mounted on a reinforced blue metal frame, the unit is built for durability and continuous operation in heavy-duty environments. The system includes multiple outlets and integrated connection points, ensuring seamless compatibility with complex piping and support structures in industrial setups.

Technical Specifications

Construction Features

- Circular compressor design
- Reinforced blue metal frame mounting
- Integrated multiple outlet connections

Primary Application	Metal Forming, Rolling Mill, Industrial
System Compatibility	Yes
