

Industrial Air Handling Unit for Climate Control

This industrial air handling unit is designed for large-scale ventilation and climate control applications. It features a robust, modular construction with insulated panels for thermal efficiency and noise reduction.

Overview

Industrial Climate Control Solution

This industrial air handling unit is engineered for large-scale ventilation and climate control applications. Featuring a robust, modular construction with highly insulated panels, it ensures superior thermal efficiency and significant noise reduction. Designed for commercial and industrial environments, the unit provides precise temperature and humidity management through an efficient top-mounted fan configuration.

Design & Construction

Construction Type	Modular
Insulation Features	Thermal Efficiency, Noise Reduction
Fan Configuration	Top-mounted

Application

Suitable Environments

- Commercial Buildings
- Industrial Facilities

Primary Function

Ventilation • Temperature Control • Humidity Control
