

Industrial Air Intake Filter

This high-performance air filter is designed for industrial machinery applications. It provides efficient filtration of airborne particles, ensuring clean air intake for optimal machinery performance and longevity.

Overview

High-Performance Air Filtration

This industrial air intake filter is engineered for demanding machinery applications, providing essential protection against airborne contaminants. Featuring a robust metallic housing paired with a specialized filter canister, it ensures consistent clean air intake to maintain optimal equipment performance. Its sturdy base design allows for secure installation, making it a reliable component for extending machinery longevity.

Technical Specifications

Construction	Metallic housing with separate filter canister
Installation	Base-mounted

Compliance & Features

Primary Application	Industrial Machinery
Key Features	Industrial Grade, Metallic Housing, Secure Base Mounting
