

Industrial Air Purification System

This air purification system features a stainless steel housing and a multi-stage filtration system. The unit is supported by three legs for stability and is designed for industrial or commercial use.

Overview

Industrial Air Purification System

This industrial-grade air purification system is engineered for demanding commercial and industrial environments. Featuring a robust stainless steel housing, it ensures durability and long-term performance in harsh conditions. The integrated multi-stage filtration system, combined with precision controls for pressure and flow, provides reliable air quality management.

Construction

Housing Material	Stainless Steel
Support Structure	Three-leg stability base

Features

Control Components

- Integrated Pipes
- Control Valves
- Pressure Gauges

Filtration System	Multi-stage Filtration
-------------------	------------------------

Application

Recommended Usage

Industrial • Commercial
