

Industrial Air Purifier with Flanged Connections

This air purifier is designed for industrial applications and features a robust steel construction. It includes flanged connections for easy integration into existing piping systems and is suitable for removing particulate matter and contaminants.

Overview

Industrial Air Purification Solution

This industrial air purifier is engineered for demanding environments, featuring a robust steel construction and a durable cylindrical design. It is specifically built for seamless integration into existing piping systems, utilizing standardized flanged connections for inlet and outlet ports. The unit is treated with a protective anti-corrosion coating, ensuring long-term reliability and performance in removing particulate matter and contaminants from air streams.

Physical Characteristics

Surface Treatment

Corrosion Resistant • Protective Coating

Construction Material

Steel

Form Factor

Cylindrical

Installation & Connectivity

Port Configuration

- Inlet Port
- Outlet Port

Connection Type

Flanged Connections

Performance

Primary Application

Particulate Removal, Contaminant Filtration, Industrial Air Streams
