

Industrial Automation Programmable Logic Controller

This programmable logic controller is designed for industrial automation. It features multiple input and output terminals, status indicator LEDs, and a compact modular design for flexible control system configurations.

Overview

Industrial Automation Controller

This programmable logic controller is designed for robust industrial automation tasks. Featuring a compact modular design, it offers flexible configuration options for various control systems. The unit includes comprehensive status monitoring with clear LED indicators for power, run, error, and battery status.

Technical Specifications

Design Type

Modular • Compact

Model Identifier

FX3U-32MR/ES

Status Indicators

Power, Run, Error, Battery
