

Industrial Automation Smart Gateway with Remote Control

This smart gateway facilitates remote control and monitoring of connected equipment. The device features control switches with Auto, Manual, and Lock positions, each equipped with an indicator LED.

Overview

Industrial Automation Smart Gateway

This industrial automation smart gateway provides robust connectivity and remote control capabilities for complex systems. Supporting multiple protocols including RS485, LAN, GPRS, 4G, and GPS, it facilitates seamless integration with various industrial environments. The device allows for the concurrent connection of up to 20 devices, supported by dedicated management software and mobile applications for efficient operation.

Connectivity & Protocols

Supported Interfaces

RS485, LAN, GPRS, 4G, GPS, MQTT

Performance

Maximum Device Connection

20 units

Concurrent Devices

Operational Control

Available Control Modes

- Auto
- Manual
- Lock

System Compatibility

System Integration

Dedicated App • Management Software
