

Industrial Axial Fan for Ventilation

This axial fan is designed for industrial ventilation and air circulation needs. It features a multi-blade impeller within a robust square frame, ensuring efficient airflow.

Product Overview

Industrial-Grade Air Circulation

This high-performance axial fan is engineered specifically for demanding industrial ventilation and air circulation applications. Built with a robust square frame construction and a precision-engineered multi-blade impeller, it ensures consistent and powerful airflow. It is an ideal solution for environments requiring reliable, long-term air movement performance.

Design and Construction

Frame Design	Square frame construction
Impeller Configuration	Multi-blade impeller

Applications

Primary Applications	Industrial Ventilation, Air Circulation, General Air Movement
