

Industrial Bimetal Thermometer

This industrial bimetal thermometer is designed for accurate temperature measurement. It features a robust stainless steel construction for durability and corrosion resistance, with clear readings on its analog dial.

Product Overview

Industrial Bimetal Thermometer

This industrial bimetal thermometer is engineered for precise temperature measurement across a variety of demanding industrial environments, including HVAC, process control, and chemical processing. Constructed with robust stainless steel, the unit offers exceptional durability and corrosion resistance for long-term reliability. The analog dial provides clear, easy-to-read temperature data, ensuring consistent performance for critical monitoring applications.

Technical Specifications

Construction Material

Stainless Steel

Customization Options

- Optional Stem Length
- Optional Temperature Range

Connection Type

Back Entry

Thread Size

1/2" BSP, 1/2" NPT, 1/2" BSPT

Applications

Suitable Industries

HVAC, Process Control, Food Processing, Chemical Plants
