

Industrial Braided Ropes for Textile Machinery

These braided ropes are designed for use in garment, shoe, and accessory manufacturing. They provide reliable support and tension for various industrial applications.

Product Overview

Industrial Braided Ropes for Textile Machinery

These high-strength, durable braided ropes are specifically engineered for demanding textile machinery applications, including garment, shoe, and accessory manufacturing. Designed to provide reliable support and consistent tension, they ensure optimal performance in heavy-duty processing environments. The construction features integrated handles and metal rings, facilitating secure attachment and ease of handling during operation.

Technical Specifications

Design Features

- High-strength braided construction
- Integrated handling system
- Reinforced metal attachment rings
- Heavy-duty tension support

Durability

Industrial Grade • Heavy-Duty

Primary Application

Textile Machinery, Garment Manufacturing, Shoe Production, Accessory Manufacturing
