

Industrial Brush Roller for Machinery

This industrial brush roller is designed for use in machinery. It features a cylindrical shape with integrated brush elements and is constructed from durable materials suitable for industrial environments.

Product Overview

Industrial Brush Roller

This industrial brush roller is designed for integration into heavy-duty machinery, serving critical functions such as cleaning, material conveying, or surface application. Engineered for durability, the roller features a robust cylindrical design suitable for demanding industrial environments. With specific model identifiers NF15A and 40082, this component is built to maintain consistent performance in continuous operational settings.

Technical Specifications

Design Features

- Cylindrical geometry
- Integrated brush elements
- Durable industrial-grade construction

Model Identifier	NF15A
Part Number	40082
Typical Applications	Industrial Cleaning, Material Conveying, Surface Application
