

Industrial Butterfly Valve

This high-performance butterfly valve is engineered for industrial fluid control. It features a durable construction with options for manual handwheel or automated actuator control.

Overview

High-Performance Industrial Butterfly Valve

This industrial butterfly valve is engineered for robust performance and reliable fluid control across various demanding applications. The unit features a durable construction, combining a blue-painted body with a precision metallic disc and high-quality sealing ring. Designed for flexibility, it supports both manual handwheel operation and automated actuator control to integrate seamlessly into diverse process environments.

Technical Specifications

Key Components

- Blue-painted industrial body
- Metallic disc
- Black sealing ring

Operation Modes

Manual Handwheel, Automated Actuator

Primary Use

Industrial fluid control systems
