

Industrial Cable Joint

This cable joint is designed for robust electrical connections. It features durable insulation and secure fastening for reliable performance in industrial applications such as apparel and textile machinery, ensuring safe and efficient power transmission.

Overview

Industrial-Grade Cable Joint

The CJ08-300A is a high-quality cable joint engineered for robust electrical connections in demanding industrial environments. It features durable insulation and a secure fastening system to ensure reliable performance and safe power transmission. Specifically designed for use in apparel and textile machinery, this component provides a dependable solution for complex electrical setups.

Technical Specifications

Rated Current

300 A

Rated Current

Model Number

CJ08-300A

Application & Performance

Key Features

- Durable insulation material
- Secure fastening mechanism
- High-quality electrical conductivity
- Industrial-strength construction

Performance Benefits

Reliable Connection • Safe Power Transmission • Industrial Durability

Primary Application

Apparel and textile machinery
