Product Overview

Industrial Resilient Wedge Gate Valve

The F909 series gate valve is engineered for reliable flow control in demanding industrial pipeline systems. Featuring a durable cast iron body and a resilient wedge design, this valve ensures a tight seal and long-term performance. It is built with a bolted bonnet and non-rising stem, making it an ideal choice for water, oil, and gas applications requiring secure, flanged connections.

Technical Specifications

Model Series	F909
Valve Type	Non-rising Stem Gate Valve
Connection Type	Flanged
Key Features	Resilient Wedge, Bolted Bonnet, Non-rising Stem

Performance Metrics

Cold Working Pressure

250 PSI
Max Pressure

17.2 Bar
Max Pressure

Compliance

Industry Standards

AWWA C509
