

# Industrial Centrifugal Chiller

This centrifugal chiller is designed for industrial cooling applications. It features a horizontal cylindrical evaporator and condenser configuration.

## Overview

### Industrial Centrifugal Chiller

This industrial centrifugal chiller is designed with a simple and compact structure, optimizing floor space while maintaining high performance. Engineered for reliability, it features balanced operation and reduced friction components, which minimizes the need for spare parts and lowers overall maintenance costs. Its lightweight design and high coefficient of performance (COP) make it an efficient solution for demanding industrial cooling applications.

## Design & Efficiency

### Operational Benefits

- High coefficient of performance (COP)
- Balanced running operation
- Reduced friction components
- Low maintenance requirements

### Design Features

Compact Structure, Lightweight, Small Footprint

## Performance Metrics

### Maintenance Profile

**0 Low**

Spare Parts Required

**0 Minimal**

Personnel Needed
