

# Industrial Centrifugal Fan for Ventilation

This industrial centrifugal fan is designed for ventilation and air movement applications. Its dynamically balanced impeller ensures smooth operation and efficient airflow.

## Overview

### Industrial Ventilation Solution

This industrial centrifugal fan is engineered for high-performance ventilation and air movement in professional environments. Featuring an external rotor motor with direct-drive technology, the unit ensures reliable operation and consistent airflow. Its robust design and dynamically balanced impeller allow it to handle demanding industrial and commercial air exchange requirements effectively.

## Technical Specifications

### Volume Flow Rate

**8000 m<sup>3</sup>/h**

Max Air Volume

### Drive Configuration

External Rotor Motor • Direct Driven

### Impeller Diameter Range

180 - 400 mm

### Max Pressure Rate

500 Pa
