

Industrial Centrifuge for Liquid-Solid Separation

This industrial centrifuge is designed for separating liquids from solids or for drying materials. It features a stainless steel drum and a robust base, suitable for various industrial applications requiring effective separation or drying processes.

Product Overview

Industrial Centrifuge for Liquid-Solid Separation

This industrial centrifuge is engineered for high-efficiency separation of liquids from solids and material drying processes. Built with a durable stainless steel drum and a heavy-duty, stable base, it is designed to withstand rigorous industrial environments. The unit features a side-mounted motor and manual control systems, ensuring reliable operation and enhanced safety during high-speed rotation.

Technical Specifications

Construction Material	Stainless Steel Drum
Base Design	Robust green-painted base for stability
Motor Mounting	Side-mounted

Operational Features

Control System	Manual lever
Safety Features	High-speed rotation safety, Secure operation mechanism

Applications

Suitable Applications

- Liquid-solid separation
- Material drying
