

Industrial Chemical Transfer Pump

This chemical pump is designed for efficient and reliable transfer of various chemical fluids. It features a robust construction with corrosion-resistant materials, ensuring durability in harsh chemical environments.

Product Overview

Industrial Chemical Transfer Pump

This industrial chemical transfer pump is engineered for efficient and reliable fluid handling in demanding environments. Its innovative design allows for maintenance and component replacement without the need to disconnect pipes or remove the motor rotor, significantly reducing downtime. Featuring a robust, corrosion-resistant construction, this pump is ideal for chemical processing, water treatment, and various industrial fluid handling systems.

Technical Specifications

Model Breakdown

Component	Value	Unit
Pump Inlet Diameter	50	mm
Pump Outlet Diameter	32	mm
Impeller Nominal Diameter	160	mm

Key Performance Metrics

50 mm Inlet Diameter	32 mm Outlet Diameter	160 mm Impeller Diameter
--------------------------------	---------------------------------	------------------------------------

Design Features

- Single stage, single suction design
- Direct coupling transmission
- Taper and direct shaft connection
- Clockwise rotation (viewed from drive end)
- Maintenance-friendly design

Compliance and Standards

Standard Compliance

International Standard • Chemical Duty
