

Industrial Chiller Unit for Cooling Applications

This industrial chiller unit is designed for cooling applications. It features a compressor, heat exchanger, and a control panel with a digital display for monitoring system parameters.

Overview

Industrial Cooling Solution

This industrial chiller unit is engineered for demanding cooling applications across manufacturing, HVAC, and various industrial processes. It features a robust compressor and high-efficiency heat exchanger, ensuring reliable and precise temperature control. The integrated control panel with a digital display and comprehensive pressure and temperature gauges allows operators to monitor system parameters with ease.

Technical Specifications

Key Components

- High-performance compressor
- Advanced heat exchanger
- Digital control panel
- Integrated pressure gauges
- Integrated temperature gauges

Monitoring Capabilities

Digital Display • Pressure Monitoring • Temperature Monitoring

Suitable Applications

Manufacturing, HVAC, Industrial Processing
