

Industrial Control EPON Network Software

This software provides an industrial control EPON network solution suitable for both ground and underground applications. The system supports IF video surveillance and rights management, incorporating a control host, workstation, and IP dispatching machine.

System Overview

Industrial EPON Control Solution

This industrial-grade EPON network software is engineered for robust monitoring and control in both surface and underground industrial environments. The comprehensive system integrates video surveillance, rights management servers, and IP dispatching for seamless operational coordination. Designed for high reliability, it supports a wide array of sensors and base stations to ensure total site connectivity.

System Components

Included Components

- IF Video Surveillance
- Rights Management Servers
- Control Host
- Workstation
- IP Dispatching Machine
- Telephone Interface

Network Hardware	KL5001 Optical Splitters, KJF16 Sensors, Base Stations
-------------------------	--

Application Suitability

Deployment Environments

Ground Industrial Sites • Underground Mining/Industrial Facilities
